feel it.

GHOST - FEEL IT. GMBH

Tuesday January 21, 2020, by [admin](#)

GHOST- FEEL IT. GMBH developed a software to create Haptic User Interfaces (HUI) on demand. This allows companies to enhance their products and services by using the sense of touch as a new channel in the human-machine-interaction. This is especially important in sensory overflow (of audio and visual input) scenarios and when subconscious processing is required. The companies can save time and money by using the GHOST - feel it service instead of hiring an interdisciplinary team.
